

Mamre Anglican School Capital Works Junior School Building

Decision Statement

12th October 2018

Introduction

The Anglican Schools Corporation (TASC) is the proponent for the construction of a new Junior School building at Mamre Anglican School, Kemps Creek. The new single storey building is setback over 10metres from the closest boundary and located adjacent to an existing junior school building and will be positioned on current "play space" area with no significant vegetation.

The proposed activity has been classed as a Class 1 – Review of Environmental Factors (REF) in accordance with the NSW Code of Practice for Part 5 Activities for registered non-government schools (The Code).

A REF was prepared by Key Urban planning dated 27th August 2018 to assess the potential impacts of the proposed activity. The REF was prepared in accordance with Part 5 of the Environmental Planning and Assessment Act 1979 (EP&A Act), Clause 228 of the Environmental Planning and Assessment Regulation 2000 and the Code.

To allow the proposed activity to proceed, TASC must make a determination of the REF in accordance with Part 5 of the EP&A Act.

The objectives of the decision statement are to:

- Assess the environmental impacts of the proposed activity and determine the significance of those impacts.
- Document consultation with agencies and the public.
- Explain why the key conclusions in the REF were or were not accepted.
- Document the authorised person's engagement with the REF.
- Make a determination of the proposed activity, or make a decision that there is sufficient information to discharge the duty under Section 111 of the EP&A Act.

Description of the Proposed Activity

The proposed activity consists of the construction of a new classroom building located centrally within the existing junior school on a vacant part of the site used as a student play area. The building is of modular construction and will be pre-fabricated off site. The proposed building will have overall dimensions of 25.2m x 25.8m.

The works are located on a cleared portion of the existing site with no vegetation. There are no trees to be removed and no impact on threatened species or their habitat.

The new building consists of four (4) teaching classrooms, a central breakout area, toilets, office and a small meeting room.

Consultation

In accordance with the provisions of the relevant Code the project underwent scoping, assessment and consultation prior to the preparation of a REF.

Mandatory consultation was undertaken from the 16th August to 14th September 2018. Written notification was provided to relevant government authorities including the NSW Rural Fire Service, local council (Penrith City Council) and the owners of adjoining properties with consideration made to submissions received within 21 business days of the date of correspondence.

Any submissions made during this period have been considered in the REF.

Consideration of Environmental Impacts

The REF details the proposed activity, assesses the potential impact of the proposed activity on the environment and provides management measures to avoid, manage and/or offset those impacts.

The main issues raised in the REF and the submissions related to:

- Legislative planning requirements of Commonwealth, State and Local Planning policies and legislation, specifically the Education SEPP and school planning principles;
- Key triggers of environmental impact and consideration, specifically in relation to bushfire prone land and flood planning issues;
- Environmental, economic and social impacts and in particular the need to provide for efficient construction and operation of low impact educational infrastructure to meet the needs of the growing population in the surrounding region.

The REF addresses the requirements of Section 111 of the EP&A Act by considering, to the fullest extent possible, all matters affecting or likely to affect the environment from the proposed activity. The REF also considers factors prescribed under Clause 228 of the Environmental Planning and Assessment Regulation 2000.

The REF assesses and considers the likely significance of the environmental impacts of the proposed activity under Clause 112 of the EP&A Act.

Mitigation measures are provided in the REF for the implementation during the construction process.

Conclusion

The REF report concludes that the proposed activity is not likely to significantly affect the environment or threatened species, populations or ecological communities, or their habitats.

The REF also considers that the proposed activity is not likely to have a significant impact on matters of National Environmental Significance (NSW) or Commonwealth land, and therefore does not require a referral under the Commonwealth EPBC Act.

With conclusions of the environmental impacts detailed in the REF, the key conclusions are accepted for the following reasons:

- The REF has been prepared by persons appropriately qualified and trained to consider and assess the impacts of the proposed activity;
- It is considered that the REF provides a true and fair review of the proposed activity in relation to its potential effects on the environment
- The REF is comprehensive, examines and takes into account, to the fullest extent possible all matters affecting or likely to affect the environment as a result of the proposed activity.

Determination

I Janet Jensen as an authorised person on behalf of The Anglican Schools Corporation have reviewed and considered the REF prepared by Key Urban Planning for the proposed Junior School Building at Mamre Anglican School in accordance with section 111 of the Environmental Planning and Assessment Act 1979.

I have been provided a detailed briefing of the REF and have gained an understanding of the impacts of the proposed activity.

As per the requirements of the relevant code I have not been involved in conducting the assessment of the proposed activity.

The proposed activity is not likely to significantly affect the environment, and is not likely to significantly affect threatened species, populations, ecological communities or their habitats.

I have determined that an Environmental Impact Statement and Species Impact Statement are not required in respect to the proposed activity. The proposed activity may now proceed subject to the implementation of the mitigation measures stipulated in the REF.

This is not a conditional decision and no further conditions are required (other than the mitigation measures stipulated in the REF)

Signed:

On Behalf of the Anglican Schools Corporation
